

2007 International Phonon Conference
Paris, France
July 15-20

Winner of the 2007 Phonon Prize

Humphrey Maris

As one of the most creative and free thinking condensed-matter experimentalists of our time, Humphrey Maris has delighted and innovated the members of our phonon community with an entertaining style and challenging wit. From his many contributions in phonon physics to capturing the motion of a single electron in liquid helium, Humphrey and his students frequently surprised and amazed us with groundbreaking physics. In recognition of his valuable contributions to our scientific community, we thank our unique colleague and anticipate hearing of his great new adventures.

For the Phonon Physics Community,

Bernard Perrin
Conference Chairman
July 20, 2007
